and Gilda's Club present**

GREEN HOME HEALTHY HOME

Saturday April 24, 2010

Americans spend up to 90% of their time indoors. Many of the pollutants found indoors can cause health reactions such as asthma and allergies. Preventing indoor air quality problems is less expensive than remedying them after they occur.

Are you considering home remodeling or just some sprucing up? Did you know that kitchen cabinets, carpet and paint can be a major source of pollutants in your home? You want to create a healthy home and provide safe and healthy indoor air quality for your family! We can help you learn how to pick products, installers and contractors that will help you achieve your goals. If you are planning a renovation or are just concerned about you family's well being, learn how green building relates to the health of your indoor environment, and get a better sense of the costs and benefits of various renovation decisions.

This event is focused on the homeowner and will help to answer these and other questions about remodeling and maintaining a green and healthy home.

When: Saturday April 24th, 2010.

9:00 am - 9:30 am: registration

9:30 am – 12:00 pm: program
